2 OCT 1973

MEMORANDUM FOR: Director of Logistics

SUBJECT : Computer Center Relocation Proposal
REFERENCE : Your memo dated 20 July 1973, ^{ok 3 4144} Subject:
Study on Utilities Support of Environmentally
Sensitive Equipment in the Headquarters
Building

REC D

1. Following upon several contacts between our offices on the problems set forth in reference study, I am summarizing below the reactions of our Operations supervisors, which include observations and cautions pertinent to any ultimate equipment relocation decisions.

2. The proposal identified several Computer Center problems, many of which flow from deficiencies in environmental conditions, but appears to have given undue weight to environmental conditions in the solutions which it recommends.

3. Other alternative solutions are acknowledged in the study but these were not fully discussed. Before a decision, we believe that other solutions should be explored to permit comparison and a choice among alternate proposals.

4. Some equipment in the Computer Center is old and relocation entails risks to its stability and reliability. In addition, the time needed to remove this equipment would result in significant personnel costs to maintain reliable services during the transition. It is unclear whether the \$4.7 million estimated cost of relocation is adequate to cover such "risk" costs. We suggest that a detailed risk analysis be made.

5. Many problems of the Computer Center, environmental and other, are due to its location, but relocation should seek to resolve the problems as fully as possible and minimize the creation of new ones. The reference study is a good first step. Perhaps now is the time for representatives of the affected components to form a study group to flesh out alternatives and consider objectively risks and advantages. I would favor the use of an independent consultant to work with the group.
